\*Flat Rate Price includes the following: QC fan(s), switches, 8-hr countdown timer & tax  
Install over 100 mile radius add \$50 trip charge

Standard formula to size systems:

Take customer's total square footage of home and multiply by two (2). This will give you the approximate amount of CFM needed to ventilate their entire home.

Example: 3,000 sf home needs about 6,000 - 7,000 cfm. For this size home we would recommend installing (3) QC-2250's

Note: QC2250's are the most popular fan, installing in central areas. QC1500's are installed in bedrooms. The Customer gets more cfm for their money by installing QC2250's
